

<b>Module name</b>	Course Module
<b>Module level, if applicable</b>	Master of Physics Education
<b>Code, if applicable</b>	32363212
<b>Subtitle, if applicable</b>	-
<b>Course, if applicable</b>	Advanced Electrodynamics
<b>Semester(s) in which the module is taught</b>	I (Odd semester)
<b>Person responsible for the module</b>	Lecturer of Courses
<b>Lecturer</b>	1. Prof. Dr. Mangasi Alion Marpaung
<b>Language</b>	Indonesian Language [Bahasa Indonesia]
<b>Relation to Curriculum</b>	This course is a compulsory course and offered in the 1st semester.
<b>Type of teaching, contact hours</b>	<p>Teaching methods used in this course are:</p> <ul style="list-style-type: none"> <li>- Lecture (i.e., case-based learning, cooperative learning, and blended learning)</li> <li>- Structured assignments (i.e., essays and case study)</li> <li>- Practice (i.e., computer simulation and case study in laboratory)</li> </ul> <p>The class size for lecture is 20 students.  Contact hours for lecture is 26.67 hours, assignments are 64 hours, and private study is 64 hours</p>
<b>Workload</b>	For this course, students required to meet a minimum of 154.67 hours in one semester, which consist of: 26.67 hours for lecture, 64 hours for structured assignments, 64 hours for private study,
<b>Credit points</b>	5.2 ECTS
<b>Requirements according to the examination regulations</b>	Students should have attended all lectures and submitted all scheduled individual and group assignments prior to the final examination.
<b>Recommended prerequisites</b>	Students should have attended all lectures and submitted all scheduled individual and group assignments prior to the final

	examination.
<b>Program learning outcomes</b>	<p>PLO 2 Master advanced knowledge of classical physics and modern physics</p> <p>PLO 4. Able to develop learning aids by utilizing advanced information technology and the student environment.</p>

<b>Content</b>	<p><b>Students will learn about:</b></p> <p>This course is a compulsory course that discusses the essential concepts of electrodynamics and their application in more depth. The discussion covers the phenomena of electricity, magnetism, electromagnetic induction, electromagnetic wave radiation and their interactions in materials. It also discusses how to apply it in everyday life and today's technology. Lectures will be held with a case-based learning approach. Mastery of this study will help students improve their knowledge, take other related scientific lectures, and develop themselves professionally in the field of physics education.</p>
<b>Forms of Assessment</b>	<p>Assessment of the learning process follows the following components: attendance 5%; assignments and presentations 30%; mid-test 30%, and final-test 35%.</p>
<b>Study and examination requirements</b>	<p><b>Study and examination requirements:</b></p> <ul style="list-style-type: none"> <li>- Students must attend 15 minutes before the class starts.</li> <li>- Students must switch off all electronic devices.</li> <li>- Students must inform the lecturer if they will not attend the class due to sickness, etc.</li> <li>- Students must submit all class assignments before the deadline.</li> <li>- Students must attend the exam to get final grade.</li> </ul> <p><b>Form of examination:</b> Forms of examination: Essay</p>
<b>Media employed</b>	<p>Powerpoint slides, simulation videos, learning management system (LMS), ZOOM application, and UNJ e-learning.</p>
<b>Reading list</b>	<ol style="list-style-type: none"> <li>1. D J Griffiths (1999) Introduction of Electrodynamics, Prentise Hall [Griffiths]</li> <li>2. J Vanderlinde (2004) Classical Electromagnetic Theory 2 nd Ed., Kluwer Academic [Vanderlinde]</li> <li>3. J D Jackson (1998) Clasical Electrodinamics 3 rd ed., John Wiley [Jackson]</li> </ol>
